Your mission challenges

The U.S. Department of the Navy (DON) is under ever-tightening budget constraints as well as increasing pressure to support expanded military operations around the globe. Strategic challenges, driven by the global war on terror and an aging, Cold War-era infrastructure and capability, are forcing DON decision makers to reassess how and where to allocate limited resources. Technology-enabled operational changes are altering the way the DON functions and are fueling the need for new platforms and capabilities. Further, future operations will require higher levels of integration and efficiency across the DON enterprise in order to achieve the success its mission demands. A trusted and proven technology partner can help the DON realize the opportunities, and navigate the challenges, that lie ahead.

How we can help

EDS, an HP company, has proudly served the needs of our DON clients for more than 20 years. Over the years, we've helped DON clients modernize business practices and aging systems, while leveraging new technologies and best practices. We look forward to extending that long-standing relationship through the SeaPort-e contract.

In addition to the experience and capabilities EDS brings to support the DON mission, we have assembled a SeaPort-e team that has the breadth and depth of mission-critical resources to consistently deliver best-value services to DON organizations across all SeaPort-e zones and in all Seaport-e task areas. As the DON charts its course for the future, our team has the experience and skills to assist in: establishing a secure, network-centric infrastructure; protecting critical information and networks; enabling effective and agile decision-making; modernizing and migrating applications to a Web-centric environment; and implementing technology solutions to facilitate warfighting and business transformation.

Whatever your need – whether for engineering, technical, programmatic or professional support – we stand ready to deliver, with effectiveness and efficiency.

Together with our teaming partners, EDS does more, assuring superior value for our DON clients.

What you can achieve

- Maximized return on investment, along with increased efficiency
- High-quality engineering, technical and program support
- Reduced cost and improved productivity
- Integration of industry best practices
- Lower implementation risk
- Easy, accessible electronic procurement

End-to-end solutions:

Research and development
Engineering, system engineering and process engineering
Modeling, simulation, and analysis
Prototyping, pre-production, model-making and fabrication
System design documentation and technical data
Software engineering, development, programming and network
Reliability, maintainability and availability (RM&A)
Human factors, performance and usability engineering
System safety engineering
Configuration management (CM)
Quality assurance (QA)
Information system (IS) development
Information assurance (IA) and information technology (IT)
Ship inactivation and disposal
Interoperability, testing and evaluation, trials

Agency service fee:

0%

Contract types supported:

Cost plus fixed fee (CPFF)
Cost plus award fee (CPAF)
Firm fixed price (FFP)

Min/Max:

None

Task order competition required:

Yes, between all awardees within the geographic zone in which the work will be completed.

Performance Period:

6/1/2005 - 5/31/2009 (base) includes two five-year option periods
Extension from April 2009 - April 2014
