

EDS IN OIL AND GAS

EDS IN OIL AND GAS

Committed to oil and gas

- Over 25 years of industry knowledge through our Oil & Gas Centre of Expertise in Aberdeen, Scotland.
- Offer clients global scale and ability to deliver in emerging oil and gas markets.
- One of the leading service providers in the energy industry, with more than 25 years of experience.
- Help clients improve operations through advanced technology and proven business processes.

Today, oil and gas companies must gain access to existing reserves and find new ways to increase production levels. That means organizations need a robust, secure and flexible IT capability to help them capture, analyze, communicate and apply the information needed for effective decision-making. EDS, an HP company, provides a broad portfolio of business and technology solutions to help companies worldwide improve their business performance.

EDS in Oil and Gas

Oil and gas companies turn to EDS to take advantage of our industry insight and leading-edge technology experience. We help oil and gas companies create a truly global infrastructure that allows for seamless operations regardless of location and give them transparency in their supply chain. By leveraging EDS' core capabilities, oil and gas companies can focus on developing services that distinguish them in the marketplace.

EDS owns intellectual property for industry solutions in hydrocarbon accounting, pipeline management, digital oil fields, smart gas stations and radio frequency identification.

Adding value to Oil and Gas clients

- Handle post-merger or acquisition activities by leveraging synergies within the existing environment to streamline overall operations.
 - Defined and upgraded the enterprise application architecture after the merger of two Portuguese, government-owned companies. As a result, EDS helped this integrated oil and gas company identify synergies in the accounting processes and applications, consolidate enterprise applications to reduce IT support costs and operationalize competitive synergies.
- Improve back-office operations to respond to business and regulatory demands.
 - Helped BP Canada reduce payroll administration costs by more than 50 percent and improve productivity.
- Build the systems to manage gas flow.
 - Developed and designed Interconnector's Shippers Information System (ISIS). ISIS provides shippers easy access to critical trading and transportation information in real time. It also ensures the client consistently meets its goal of 99.9 percent service availability for its operations and shipper communities.
