

## FRONT PAGE SIDEBAR

- Features and Benefits
- Reduce enterprise risk
- Demonstrate policy compliance
- Cost management
- Control both authorized and unauthorized data activities
- Locate, identify and classify critical information
- Prevent unauthorized sharing via IM, CD, USB, email etc
- Real time data monitoring for safe sharing
- Data risk management strategy
- Information protection

*"Lost business now accounts for 65 percent of data breach costs"*

– Ponemon Institute, 2007

# CONTROL ENTERPRISE DATA WITHOUT RESTRAINING YOUR BUSINESS PURSUITS

## EDS DATA LOSS PREVENTION SERVICES

### Establish a secure information management structure

No checklist or software patch alone can secure your information. The enterprise risks are too great to ignore. Compromised data can result in loss of business, reputation or brand impairment and intellectual property issues. It can also make your company vulnerable to spyware, corporate espionage, social engineering, and asset damage.

The solution is as unique as your technology and your organization. EDS applies a holistic security approach to develop a secure information management and risk mitigation program. We'll work with you to set up an internal structure that will identify and classify your critical enterprise information and prevent others from passing it on without authorization. The strategy covers management, control and business processes and includes:

**INFORMATION RISK ASSESSMENT** - Evaluate your risk of data loss with a 'Rapid' two-week fixed rate assessment analyzing a data 'snapshot'. Alternatively, a comprehensive approach will extend and build on this to develop an optimized solution and business case for full data loss prevention.

**DATA IN MOTION (NETWORK)** – monitors traffic on the network to identify content being sent across specific communications channels.

**DATA AT REST (STORAGE)** – scans storage and other content repositories to identify where sensitive content is located.

**DATA IN USE (ENDPOINTS)** – addresses the endpoint via an agent used to monitor interactive data manipulation by users.

This information is further used to establish a baseline for regulatory compliance, enterprise information and security policy enforcement. Also, by working with the same IT provider in both the assessment and implementation stages, you save time and money, securing your data as quickly and efficiently as possible.

### End-to-end protection of mission-critical information

From design and deployment to monitoring and maintenance, EDS Data Loss Prevention Services helps you to protect enterprise data and information, resulting in safer business operations, reduced risks and fewer incident costs through seamless compliant policy enforcement and data control.

## EDS Consulting Services adds extra value

To complete a comprehensive data protection approach EDS offers Data Loss Prevention Consulting Services. These services support ad-hoc, industry specific, geographic, legislative and vertical data loss prevention activities, helping clients understand and implement solutions unique to its business challenges.

### INHERENT DLP SERVICE SECURITY

- Encrypted information storage
- Protected communication channels
- Secure credential management
- Detailed activity audit logs

- Privacy Impact Analysis
- Data Protection Assessment
- Data Classification Development
- Data Protection Vendor Selection
- Data Protection Integration
- Data Protection Process Enablement
- Data Protection Optimization
- Data Protection Strategy

## EDS expertise helps you protect vital information

Our proven approach, tools and methodologies provide protection to organizations worldwide:

- EDS employs over 2,500 security and privacy professionals worldwide
- EDS deploys laptop and desktop encryption in over 65 countries and 100's of thousands of devices
- EDS manages and monitors more than 5,500 firewalls and 3,000 intrusion detection systems for threats and vulnerabilities
- EDS examines and stops 1.7 billion junk mail messages each month
- EDS detects and quarantines over 3 million viruses annually
- EDS was honored for "Overall Excellence in Security" at the 2008 Excellence in Security awards during the Microsoft Chief Security Officer (CSO) summit
- EDS manages billions of security events daily – 1.8 billion for one client alone
