

Features

- Enterprise Scalability, aggregating vast amounts of data
- Enhance Security and Risk Mitigation
- Simplify Compliance
- Optimize Operations
- Log Management
- Security Event Management
- ESEM Consulting
- Optional Security Incident Response

REDUCE RISK AND LOWER COSTS THROUGH PROACTIVE MANAGEMENT OF SECURITY EVENTS

EDS ENTERPRISE SECURITY EVENT MANAGEMENT

The average corporate firewall detects around 11 billion security events each year. Enterprise servers deal with close to 600 million unauthorized hits annually. Each attack is more competent and sophisticated than the last, making them much harder to detect ... and much more likely to bring down your mission-critical business functions. EDS, an HP company, can help.

Proactively identify and eliminate threats

EDS Enterprise Security Event Management (ESEM) actively collects security-relevant events and logs them into a single, global database. Within milliseconds, data is sorted and filtered, allowing our security experts to identify and pinpoint emerging threats and attacks, and to respond proactively to contain costs and protect enterprise systems and services. The system also generates pre-defined reports to demonstrate compliance with policies, laws and regulations.

Billions of transactions complicate threat detection

The exponential growth in the number of compute 'events' can make it a challenge to protect your vital data, control costs and reduce risk. Add to that the pressures of demonstrating management and control to meet compliance requirements - where failure to comply can result in fines of millions - and you've got a lot to contend with in today's globally complex operating environment. ESEM proactively tackles those issues, letting you focus on your core business.

Set the bar high for enterprise security

Through the rapid detection of critical events and predetermined targeted responses, EDS ESEM services reduce enterprise risk while providing a unified view of security across the enterprise, bringing you:

- Cost savings through fully automated processes, and cost avoidance by preventing successful attacks
- Legislatively compliant processes and reports to support certification efforts
- Faster, more accurate global consolidated data feeds
- Peace of mind from knowing the cost of managing security events directly results in a more secure business

Building a solid foundation for secure, compliant IT infrastructures

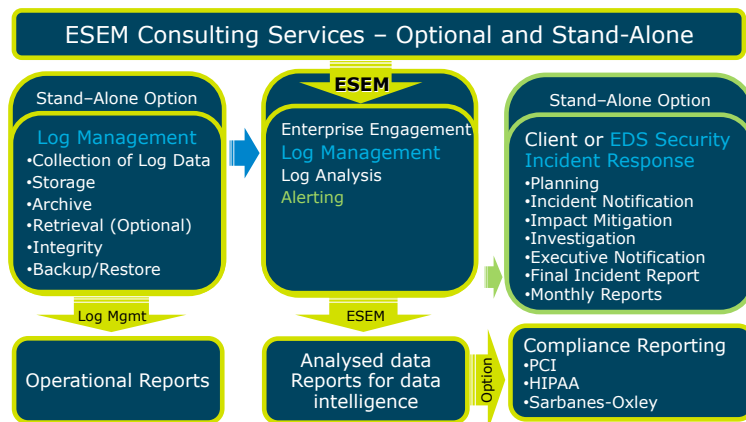

Individual EDS ESEM services can be flexibly integrated for heightened protection:

- Event collection, the foundation of ESEM, compiles all security-relevant system logs from hosting, network, security and other devices throughout the enterprise.
- Log analysis, based on careful planning, distinguishes the data that matters most in preventing incidents and mitigating risks.
- Alerts indicate which threats to investigate based upon predefined thresholds, optionally initiating an EDS Security Incident Response.
- Log Management includes the storage, archival, backup, retrieval and maintained integrity of the system logs that ESEM collects - ideal for digital forensics.
- Reporting provides a network security status and, more importantly, it can demonstrate compliance with government legislation or industry standards.

COST-EFFECTIVE AND CUSTOMIZABLE SOLUTION

Service excellence

- Proven reviewed and refined installations to reduce overall deployment risks
- Global scale
- Fast automated Log Management and Event handling
- Expert event analysis and filtering
- Leading edge intelligence from several global feeds and unfolding client events
- Integrated services approach
- Market leading technologies
- Private network to avoid denial of service attacks
- Optional consulting to optimize critical event capture
- Optional Expert Security Incident Response using staff trained in law enforcement
- ESEM Implementations within legislatively certified client operations

EDS clients trust our demonstrated expertise

- EDS collects stores and processes over 14 terabytes of event data monthly
- EDS Manages 1.8 billion events daily for one client
- Manage and monitor more than 5,500 firewalls and 3,000 intrusion detection systems for threats and vulnerabilities
- Mitigates over 3700 security incidents a month
- Stops over 1.7 billion junk mail messages a month
- Detects and quarantines over 3 million viruses annually
- Employs over 2,500 Security, Compliance and Continuity professionals worldwide
- Honoured for "Overall Excellence in Security" at the 2008 Excellence in Security Awards during the Microsoft Chief Security Officer (CSO) Summit.
