

PLAN YOUR ENTERPRISE'S BEST TECHNOLOGY DIRECTION

EDS IT TRANSFORMATION SERVICES

Architect business value through transformation of core business capabilities. IT Transformation Services by EDS, an HP company, brings the rigor of the world's largest technology company to design a tailored road map for your enterprise's IT transformation, enabling effective change.

SERVICES

- **IT STRATEGY AND TRANSFORMATION PLANNING** - Defines and delivers a complete, structured and actionable plan for managing the enterprise's IT transformation, optimizing the balance between capital and operational expenditure.
- **IT GOVERNANCE** - Assesses suitability of existing governance and defines the required future structure, processes and prioritization methods to ensure IT investments align to business goals and enable sound IT investment decisions.
- **ENTERPRISE ARCHITECTURE** - Defines the future-state IT environment required to support the client's business strategy by assessing suitability of current enterprise architecture (EA) practices, defining the required-state EA and developing the corresponding sustainable EA program.

Ensuring business and IT alignment

As businesses evolve and create new strategies for growth, they find inefficient and outdated technology embedded in business practices. The business lacks agility. The company's information technology (IT) systems are no longer aligned with business goals. The enterprise knows how it wants technology to support the business but does not know how to create the common system that will do what it needs.

Proven paths to successful transformation

EDS helps businesses make the right choices to transform their enterprise IT so that it is fully aligned with business goals. Our approach creates an integrated strategic road map for transformation using best-in-class processes, applications and infrastructure. Based on our transformation methods and industry-specific frameworks - developed through years of helping companies transform their IT systems - we can create and guide you through an optimal transformation journey, ensuring you reach your goals and achieve the right return on investment.

How it works

- Unlike other providers who seek to position their proprietary middleware, or niche strategic companies who can only address a limited part of the technical ecosystem, EDS can work from top to bottom, aligning the business strategy with IT - through optimizing business capabilities to modernizing applications to designing the next generation data centers.
- EDS becomes a valued partner to provide solutions that reduce IT costs and complexity while driving new levels of business performance - all without disruption to your business. To do this, we use a proven IT transformation life cycle model to help you define, govern, execute and sustain a tailored transformation road map to modernize your IT portfolio.
- We offer single-source, end-to-end transformational consulting, including IT strategy planning, enterprise architecture, IT governance and executable road maps, as well as integrated links to our expansive capabilities and solutions to effectively improve business outcomes.

BEST PRACTICES IMPROVE STATE'S SERVICE PROCESSES

This state agency faced a series of complex issues that included increased case loads, inconsistent processes, and complex and confusing policies. The agency needed to clarify its goals and redesign its business model.

EDS conducted a thorough current-state analysis that not only confirmed the agency's concerns but also identified issues it had not recognized before. EDS designed a future state for the agency that included best practices from state government and private industry.

The new business model met the agency's goals and helped optimize resources, streamline job functions, enhance relationships with community partners and better control turnover. It enables the agency to operate more efficiently and use cost savings to more effectively serve its client base.

Lower costs and achieve business goals

- Reduce future IT spend by up to 50 percent to achieve best-in-class cost structure.
- Create a sustainable IT solution tailored to your business goals and capable of seamlessly absorbing change.
- Establish a process to strategically enhance IT systems, processes and assets.
- Leverage an IT strategy for continual improvement supported by prioritized ongoing IT investments that are fully aligned to business benefits.
- Transform innovation/maintenance spend ratio from 20/80 to 80/20.
- Ensure governance enables the right decisions, with complete transparency of the full IT portfolio eliminating all shadow IT.

Achieve effective, value-driven transformation

- Our proven methods - from more than four decades of experience - are combined with lessons learned from HP's internal IT transformation to create the most mature and complete IT transformation approach in the marketplace.
- EDS provides a fully integrated approach across the whole transformation life cycle - from initiation and discovery, through building the program and business case, to project launch and execution - by leveraging our comprehensive IT services portfolio.
- EDS adapts to your situation and understands your issues while focusing on the business requirements to meet your company goals.
- EDS and HP have a services work force of more than 43,000 in 80 countries. Our senior consultants, architects and program directors possess industry-standard certification and the decades of experience that quickly creates trusted partnerships
- Our dominant partner ecosystem brings the best talent and solutions across SAP, Oracle and Microsoft technologies, and ongoing support from HP Labs brings our clients a steady stream of applications-related innovations.
